

Structural Engineering

BESTECH's structural engineering department is known for its innovative and collaborative design solutions that are paired with practicality, knowledge, and hands-on experience.

Clients engage with our structural engineers and designers because they offer extensive practical experience in mining and industrial applications. We deliver sound structural designs that withstand harsh industrial environments.

Our structural engineering professionals provide our clients with structural design, modifications, additions, and assessments. At BESTECH, we understand how important sound structures are to your business operations. For new structural projects, we deliver creative solutions that will support productivity for years to come. For existing structures, we tackle our projects by improving and extending the service life. In all of the projects we undertake, we prioritize the health and safety of all personnel.

Our structural engineering expertise includes design and rehabilitation of concrete, steel and timber structures.

Our team is on-site and involves clients through every step of the project. These processes ensure that the finalized product will be successful in their unique environment.

BESTECH is proud to serve clients around the world. Our accomplished team delivers innovative solutions to our client's complex problems.
