

Mechanical Engineering

BESTECH's mechanical engineering professionals are known for their innovative, practical, functional, and collaborative design solutions.

Clients benefit from working with our engineers and designers because they offer extensive experience in mining and industrial applications. By actively participating in client projects, and conducting on-site visits, our team fully understands their pain points and how to ensure the solution will work in a production environment.

BESTECH's mechanical engineering group works collaboratively with our clients to take a project from an idea, through to studies, design, commissioning and ongoing maintenance. We work in close collaboration with the entire project team, to guarantee the performance of the integrated systems. Our highly knowledgeable staff has exceptional expertise in material handling systems, pumping and piping, crushers, conveyors, dust collection, and beyond. Our hands-on approach provides us with additional insight to succeed in a dynamic industrial environment with ongoing challenges.

We pride ourselves on creating lasting partnerships with our clients. We approach all of our projects with an eye for improvement and believe in delivering the best possible solutions for your specific needs.

BESTECH is proud to serve clients around the world. Our skills and expertise are in demand by global mining clients.

Standard Qualifications

- Project Management
- Mine Ventilation Infrastructure
- Mine Dewatering Systems
- Materials Handling Systems
- Dust Collection Systems
- Compressed Air & Distribution Systems
- Mine & Process Piping Systems
- Motor & Valve Sizing
- Pumping and Piping Systems
- 3D Drawings
- Mine Potable & Process Water Design & Distribution

BESTECH

Discuss. Design. Deliver.
